This protocol laboratory manual is designed for daily laboratory use. With vivid color photographs, descriptive line art & detailed special staining techniques, histotechnologists can achieve the highest quality preparations. Written by experienced histotechnologists & pathologists at the AFIP, this up-to-date comprehensive laboratory manual gives histotechnologists detailed information & helpful tips on how to produce optimal slides. Now available from: The American Registry of Pathology AFIP, Room 1077, Washington, D.C. 20306-600, (202) 576-2940. Cost: \$35.00, 25 percent discount to U.S. bookstores. \$3.00 S&H per book, domestic address. 25 percent S&H per book, foreign addresses. Back to Home Reference Books S.N. Title Author 1 Dorland's Medical Dictionary Merck Source 2 Medical Encyclopedia 3 Stedman's Medical Dictionary Tags: Formalin, 10% Buffered Neutral (#15740) Section: Paraffin, 6 microns\*Recommended technique includes a control slide. Staining Procedure : Deparaffinize and hydrate to distilled water. Mix 1.0ml (20dr.) Crystal Violet, 1% Aq., (#26105-01) with 5 drops Sodium Bicarbonate, 5%, Aq., (#26105-02); pour onto slides held in a staining rack. Agitate gently to cover section: stain slides for 1 min. Rinse in distilled water. Flood with Gram's Iodine, (#26105-04), 1 min., rinse with water and carefully blot with filter paper to dryness. Decolorize with Acetone-Alcohol, 1:1, (#26105-05) by dropping onto the slide until no more color runs off. Stain in the Basic Fuchsin Working, (#26105-3A) or (dilute one vol. Basic Fuchsin Stock, 0.25%, Aq., (#26105-03) with 10 vol. distilled water), 1 minute; wash in water, blot carefully but not to complete dryness as in step #3. Differentiate in Acetone, (#26105-07), i.e. one quick dip, then transfer immediately to the Picric Acid - Acetone Solution, 0.1%, (#26105-06) to complete. Differentiate until sections show yellowish-pink. Rinse quickly in Acetone, then Acetone-Xylene, (#26105-08). Clear in 3-4 changes Xylene, (#23400) alone. Mount. Results: Gram+ Bacteria, Nocardia and Actinomyces Filaments Blue Gram- Bacteria, Nuclei Red Additional tissue elements Yellow Note: See also the Taylor modification of the Brown and Brenn +/- technique noted for the varying differentiation available. Over-differentiation in the B&B step #6 is a problem with some sections; run the control slides at varying rates to determine the amount for the specific organism.
